

Advanced Integrative Therapy (AIT) Treatment for Adverse Childhood Experiences (ACE)

Content

The CDC-Kaiser Permanente ACE study has uncovered how ACEs are strongly related to the development of risk factors for disease, and well-being throughout life. The energetic removal of trauma related to ACEs can be treated with AIT therapy. This webinar includes an overview of the ACE study and questionnaires, a review of a proposed AIT treatment plan to treat ACEs, practice time with colleagues using the treatment plan, and one monthly follow-up session for case reviews and to answer any questions.

February 21-22, 2025

An 8-hour online training plus a 2-hour follow-up session*
